

Awagasaki School Zone

Heavy rain that occurs once every 1000 years or more
Estimated maximum scale

Rainfall criteria prerequisite to designation of estimated flooding areas

Onogawa River/ Kahoku Lagoon:
two day total rainfall 768mm
Inland water: one hour rainfall 130mm
(Heavy rain that occurs once every 1000 years or more in general)

Estimated flooding areas due to **estimated maximum scale rainfall (once every 1000 years or more)** for river overflow flooding and inland water flooding show the range and risk of flooding. In addition, historically flooded areas are included. Please note there is a potential for flooding in the areas outside the estimated areas, depending on rainfall conditions.

Inland water flooding

Note: See P11 for the difference between river overflow flooding and inland water flooding.

Evacuation

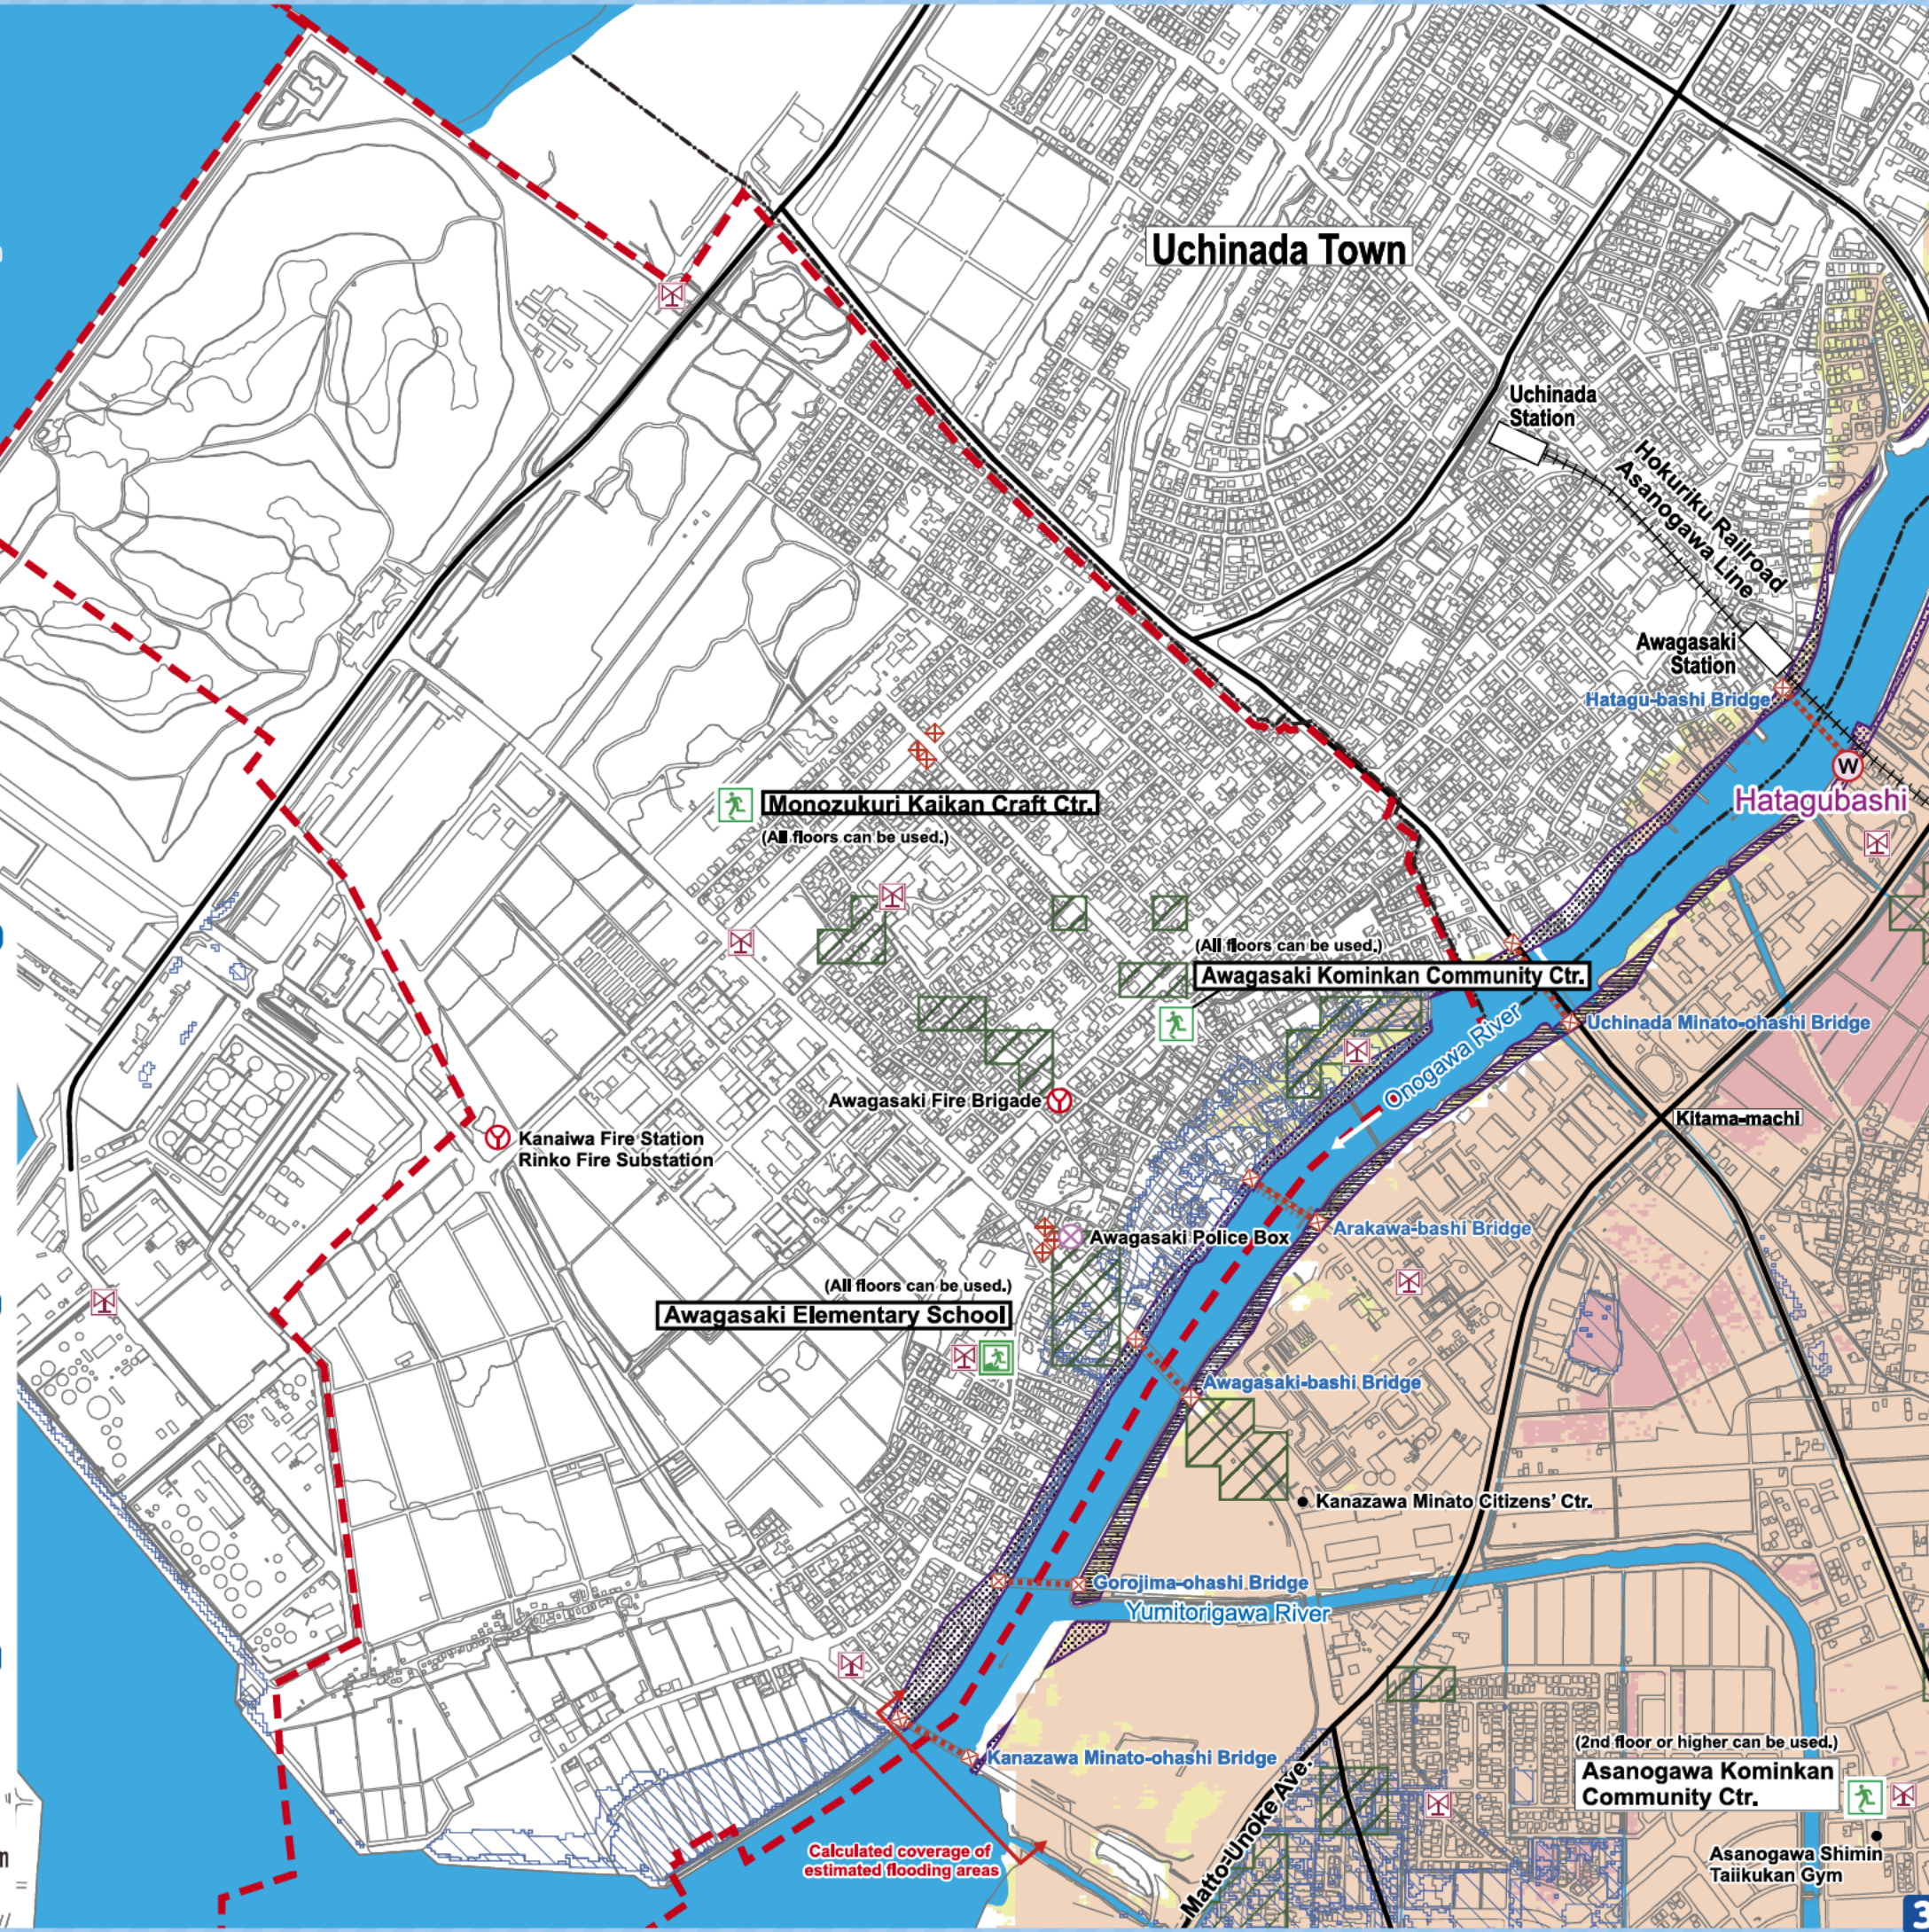

Areas where evacuation is required (due to building collapse)

Riverbank erosion
Area where buildings may collapse due to embankment destruction

Overflow
Areas where buildings may collapse due to water flow

Awagasaki School Zone

Heavy rain that occurs once every 100 years
Estimated flood scale

Rainfall criteria prerequisite to designation of estimated flooding areas

Onogawa River/ Kahoku Lagoon:
 two day total rainfall 256mm
 (Heavy rain that, in general, occurs once every 100 years)

This hazard map shows a simulation of river overflow flooding due to heavy rain that **occurs once every 100 years (in general)**, including the range and risk of flooding. In addition, historically flooded areas are included.

Please note there is a potential for flooding in the areas outside the estimated areas, depending on rainfall conditions.
