

Kosaka School Zone (South)

Heavy rain that occurs once every 1000 years or more
Estimated maximum scale

Rainfall criteria prerequisite to designation of estimated flooding areas

Asanogawa River: two day total rainfall 914mm
 Kanakusari-gawa River: two day total rainfall 938mm
 Inland water: one hour rainfall 130mm
 (Heavy rain that occurs once every 1000 years or more in general)

Estimated flooding areas due to **estimated maximum scale rainfall (once every 1000 years or more)** for river overflow flooding and inland water flooding show the range and risk of flooding. In addition, areas historically flooded since 2008 or later are included. Please note there is a potential for flooding in the areas outside the estimated areas, depending on rainfall conditions.

Estimated flooding areas and maximum water level

River overflow flooding	Evacuation
5.0m~ Flooding above 2nd floor roof	Areas where evacuation is required (due to building collapse)
3.0~5.0m Flooding of 2nd floor	Riverbank erosion
0.5~3.0m Flooding up to 1st floor ceiling	Area where buildings may collapse due to embankment destruction
0~0.5m Flooding up to adult knee	Overflow
	Areas where buildings may collapse due to water flow
Inland water flooding	Sediment disaster
0.5m~ * Evacuation difficult due to water flow	Sediment disaster risk areas
0~0.5m	Sediment disaster hazard areas
Historically flooded area	
* Areas where flooding occurred due to heavy rain in 2008 or later	

Note: See P15 for the difference between river overflow flooding and inland water flooding.

Kosaka School Zone (South)

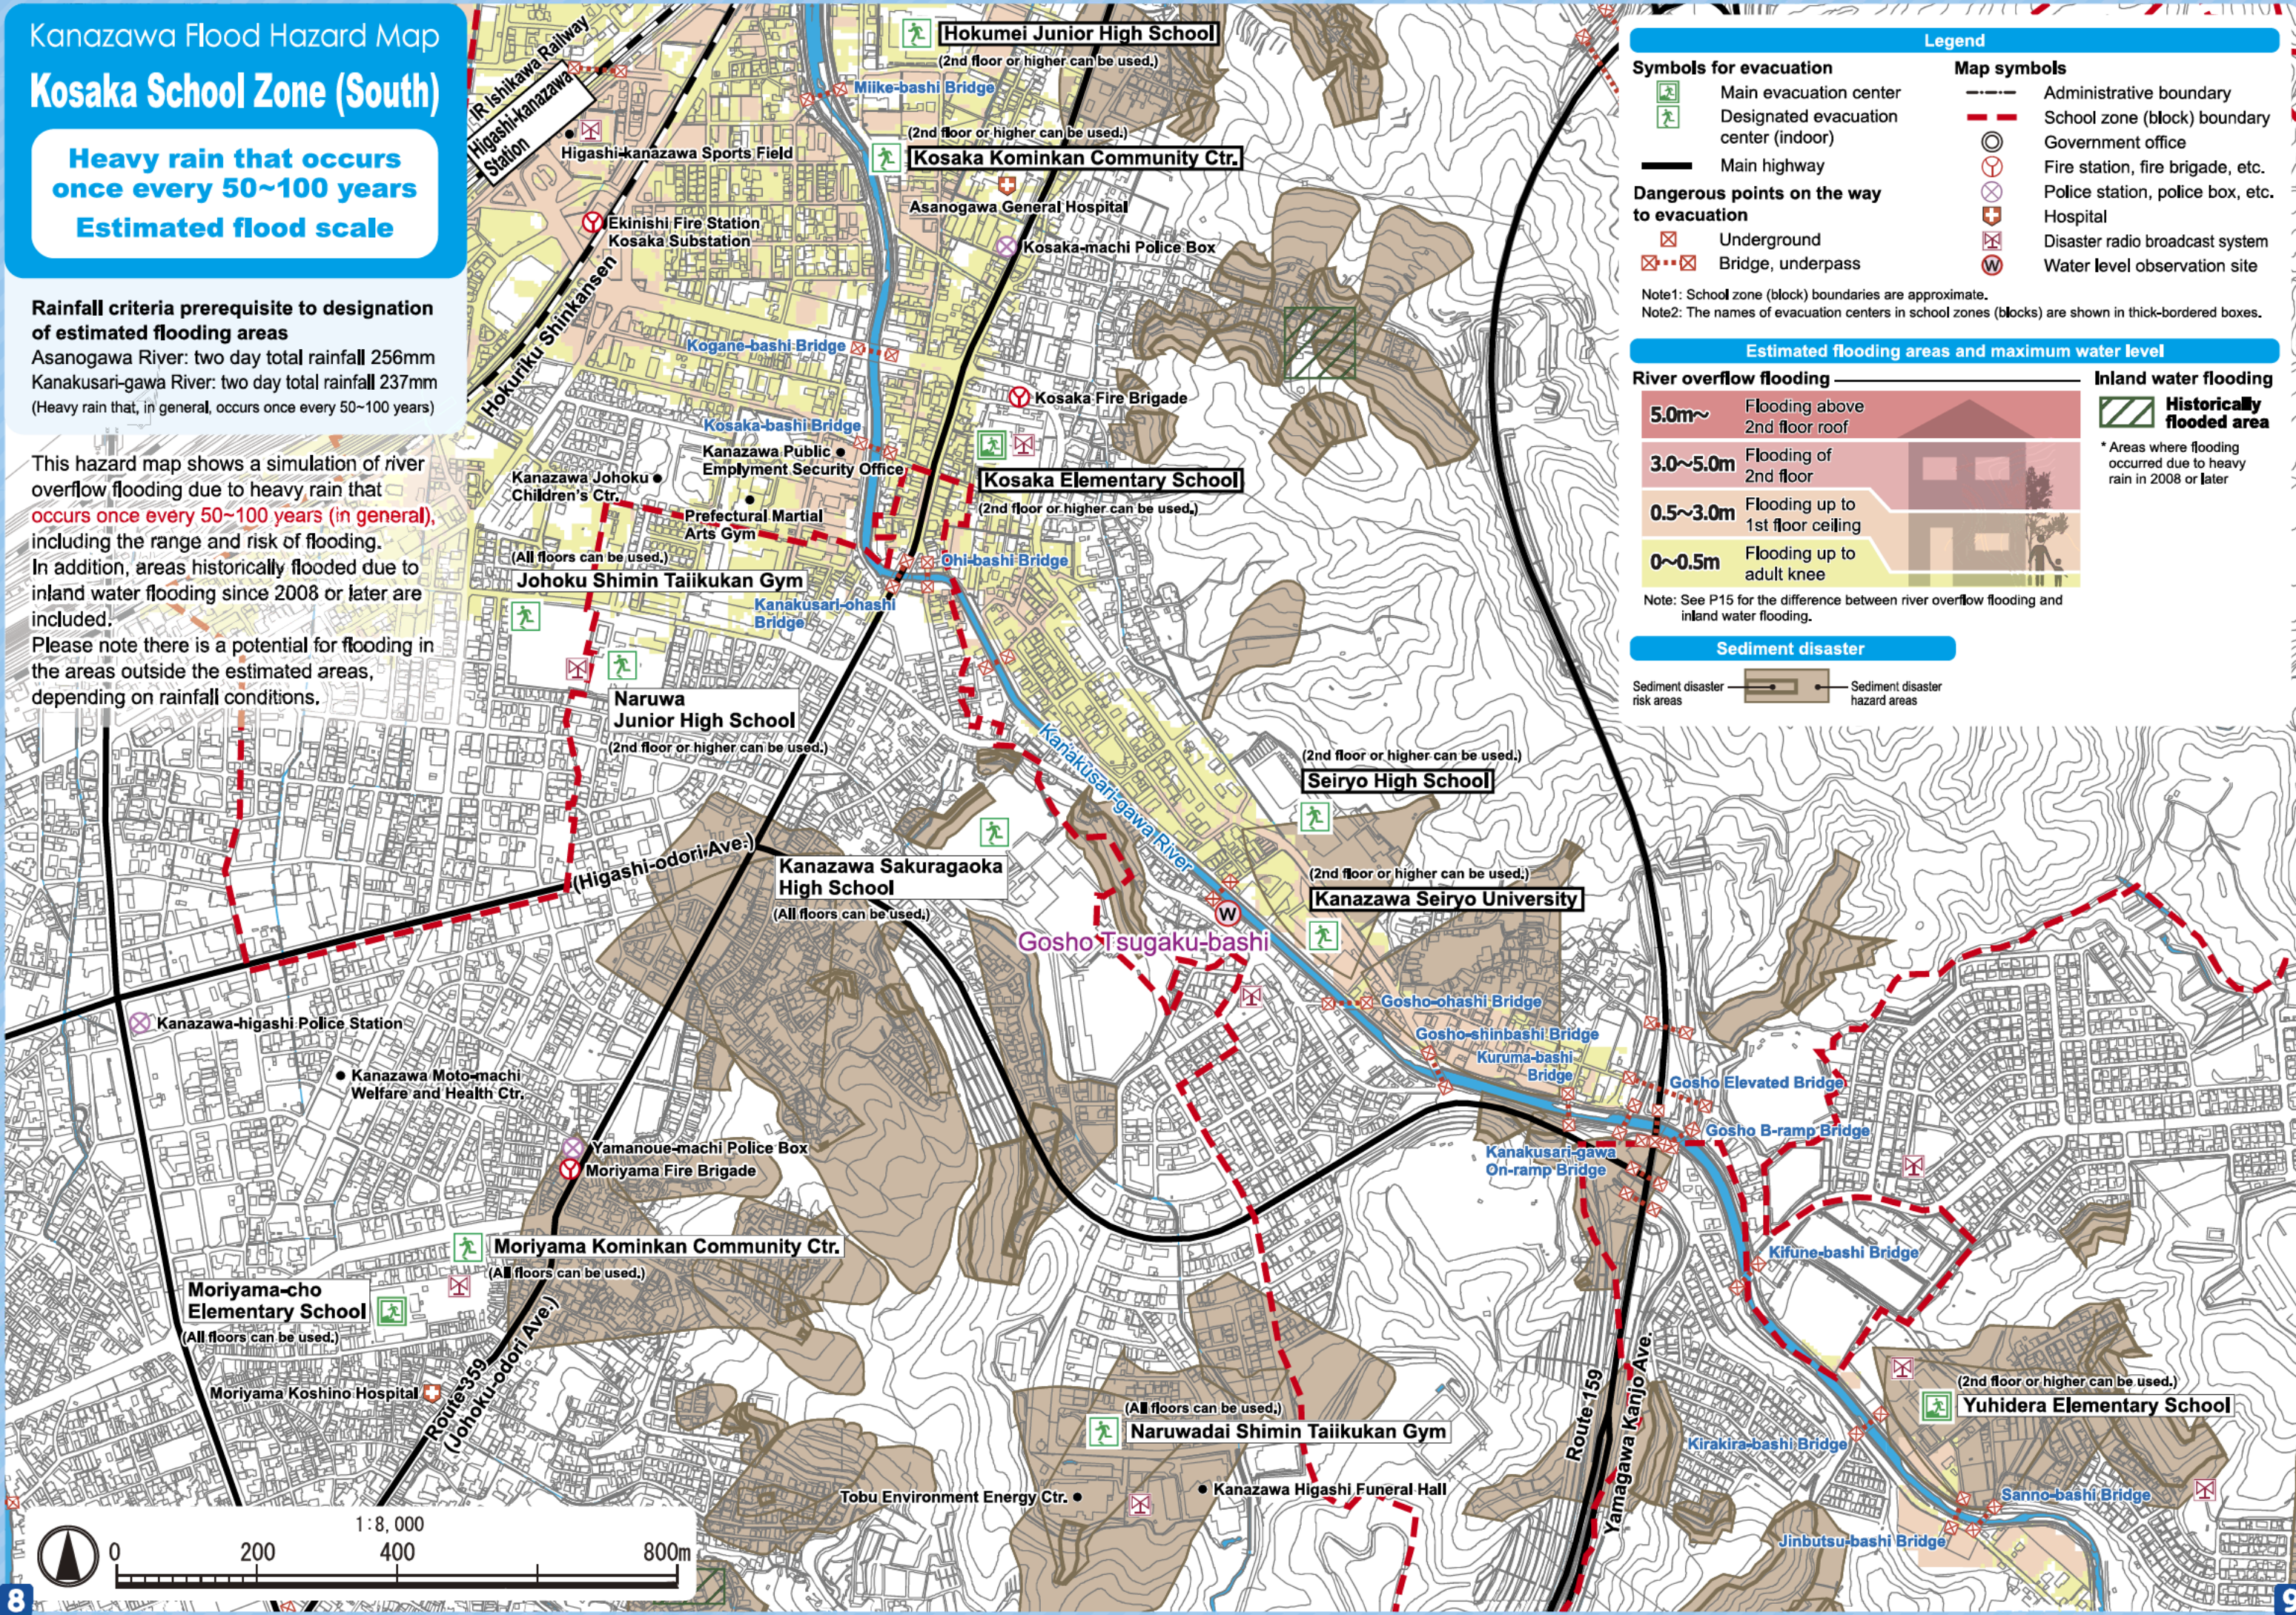

Heavy rain that occurs once every 50~100 years
Estimated flood scale

Rainfall criteria prerequisite to designation of estimated flooding areas

Asanogawa River: two day total rainfall 256mm
 Kanakusari-gawa River: two day total rainfall 237mm
 (Heavy rain that, in general, occurs once every 50~100 years)

This hazard map shows a simulation of river overflow flooding due to heavy rain that occurs once every 50~100 years (in general), including the range and risk of flooding. In addition, areas historically flooded due to inland water flooding since 2008 or later are included.

Please note there is a potential for flooding in the areas outside the estimated areas, depending on rainfall conditions.
