

Kanazawa Flood Hazard Map

Nagadohe

Heavy rain that occurs once every 1000 years or more
Estimated maximum scale

Rainfall criteria prerequisite to designation of estimated flooding areas

Saigawa River: two day total rainfall 860mm
Asanogawa River: two day total rainfall 914mm
Inland water: one hour rainfall 130mm
(Heavy rain that occurs once every 1000 years or more in general)

Estimated flooding areas **due to estimated maximum scale rainfall (once every thousand years or more)** for river overflow flooding and inland water flooding show the range and risk of flooding. (Previous flooding simulation results are taken into consideration for inland water flooding). In addition, areas historically flooded since 2008 or later are included. Please note there is a potential for flooding in the areas outside the estimated areas, depending on rainfall conditions.

River overflow flooding

Inland water flooding

Note: See P11 for the difference between river overflow flooding and inland water flooding.

Evacuation

Areas where evacuation is required (due to building collapse)

Riverbank erosion

Area where buildings may collapse due to embankment destruction

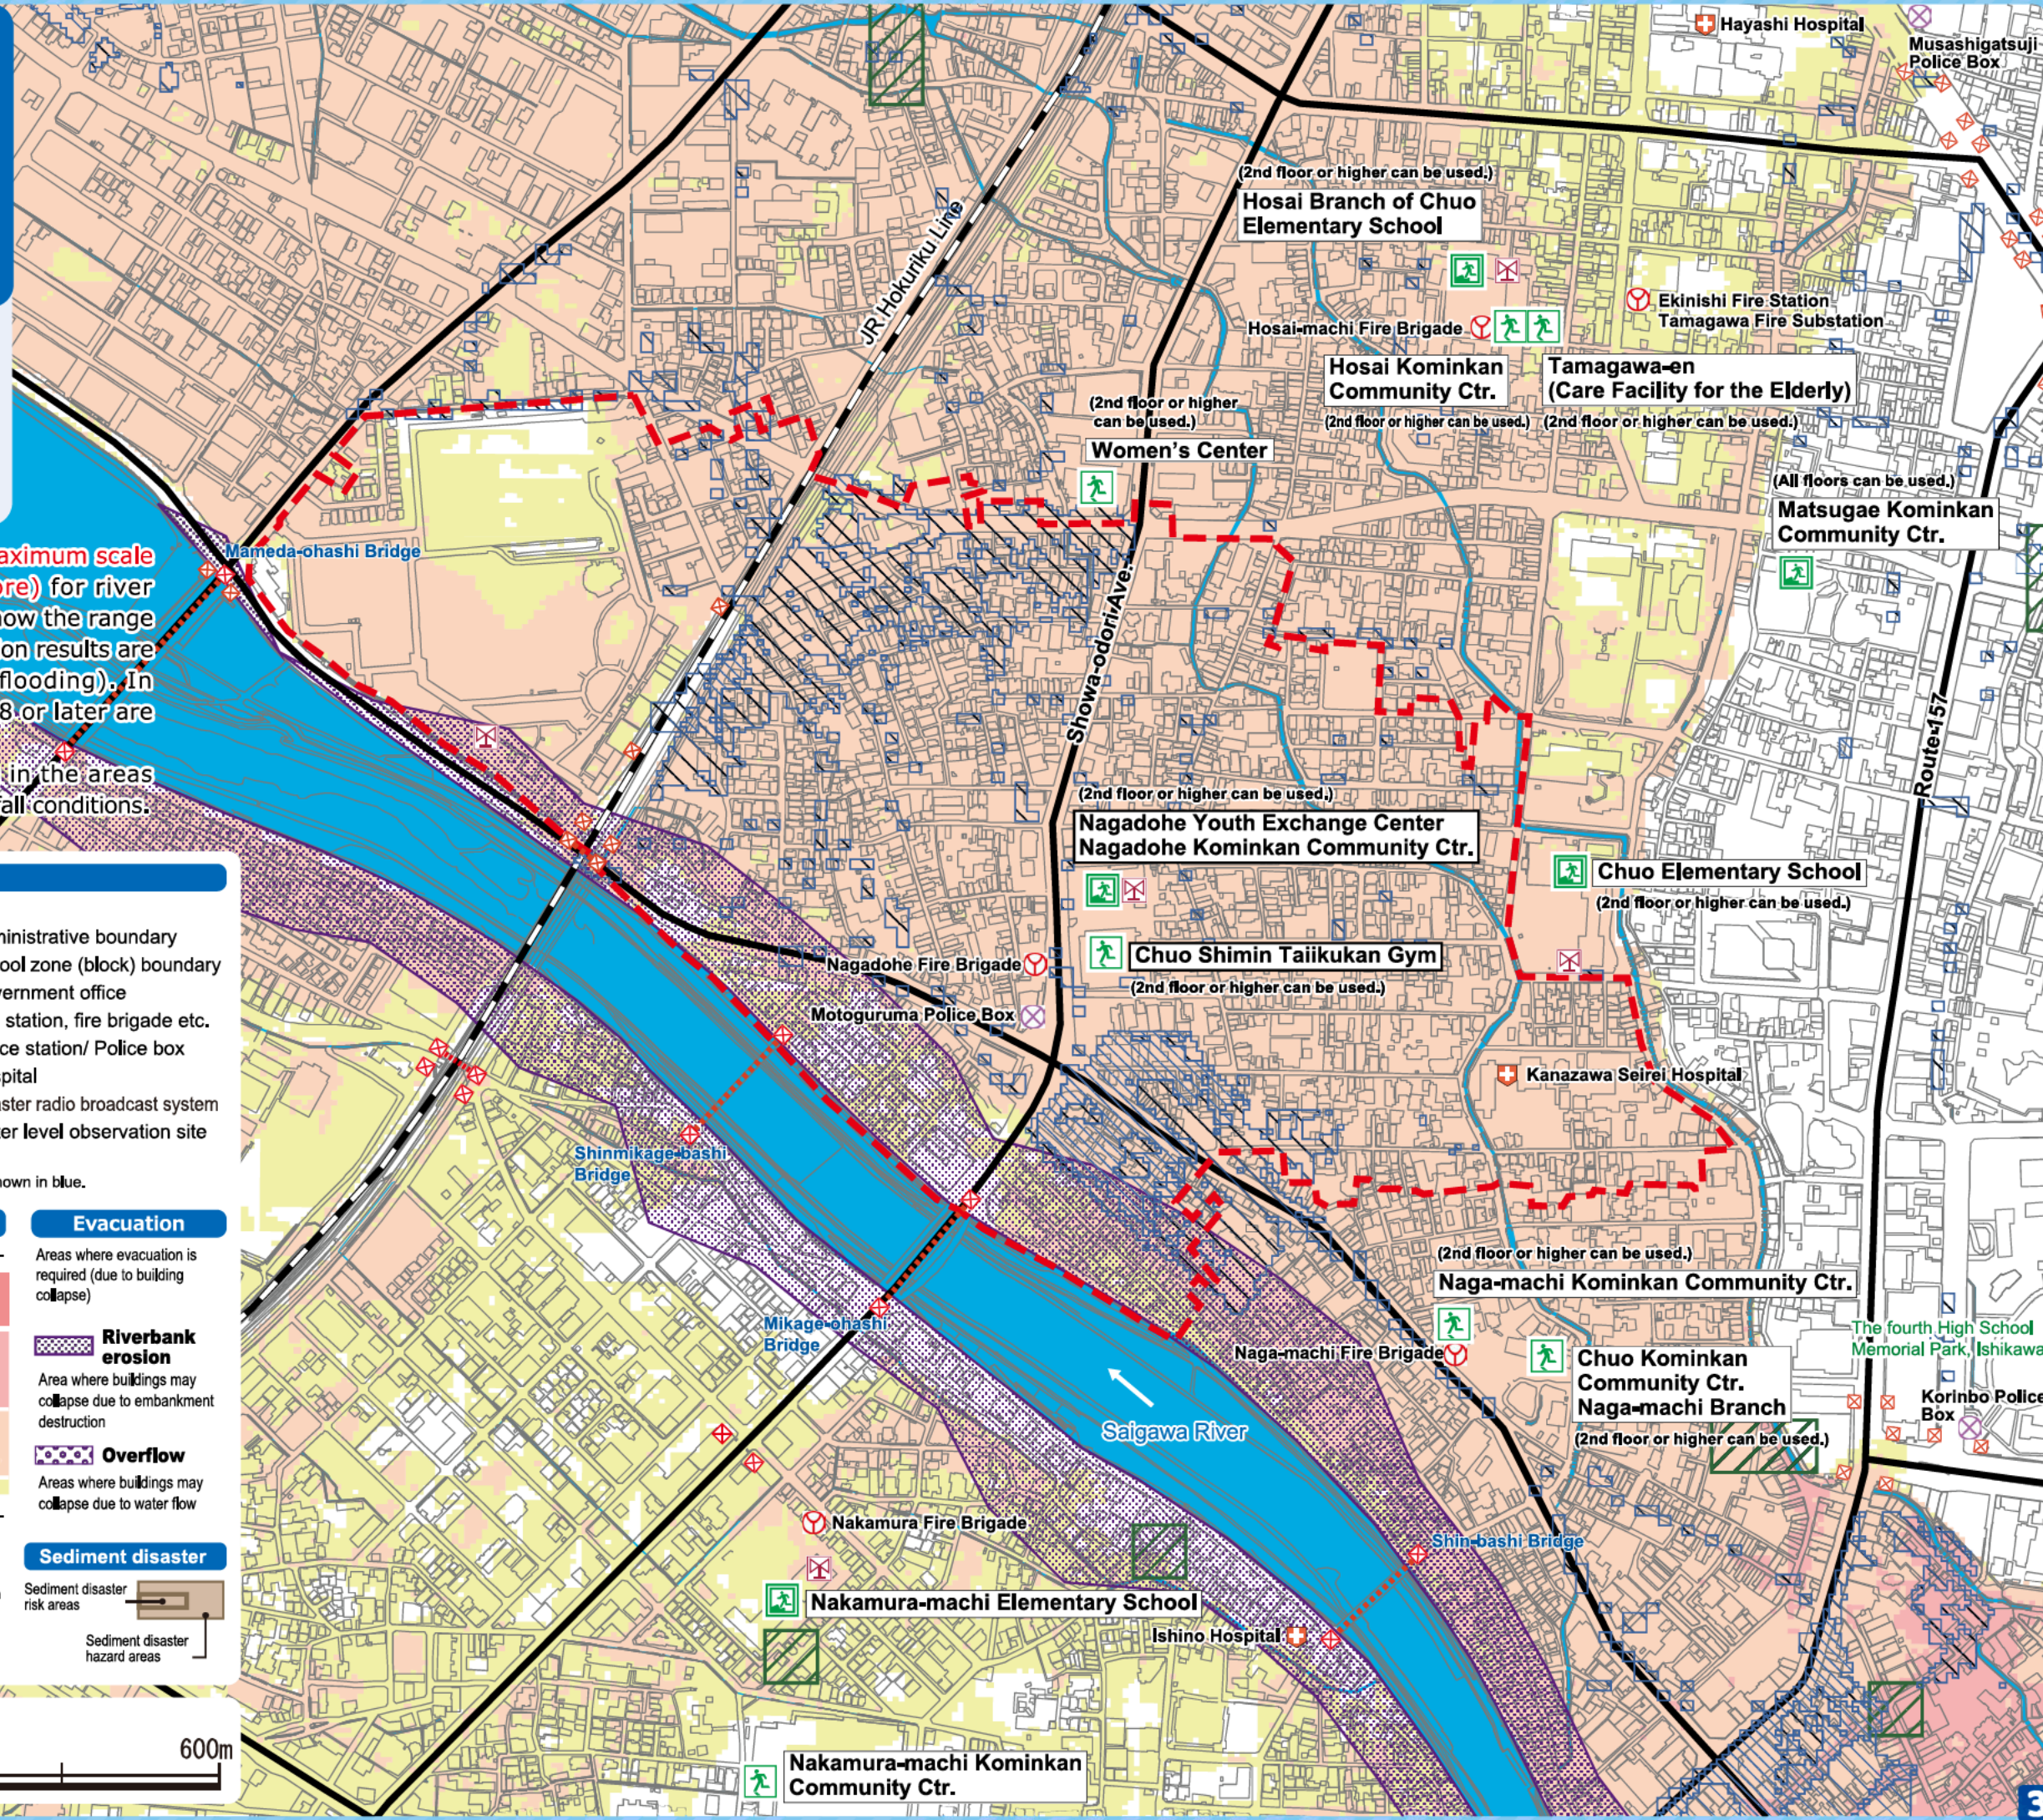

Overflow

Areas where buildings may collapse due to water flow

Kanazawa Flood Hazard Map Nagadohe

Heavy rain that occurs once every 100 years
(Saigawa River/ Asanogawa River)
Estimated flood scale

Rainfall criteria prerequisite to designation of estimated flooding areas

Saigawa River: two day total rainfall 314mm
Asanogawa River: two day total rainfall 256mm
(Heavy rain that, in general, occurs once every 100 years)

This hazard map shows a simulation of river overflow flooding due to heavy rain that **occurs once every 100 years (in general)**, including the range and risk of flooding.

In addition, areas historically flooded due to inland water flooding since 2008 or later are included.

Please note there is a potential for flooding in the areas outside the estimated areas, depending on rainfall conditions.
