

Nuka School Zone

Heavy rain that occurs once every 1000 years or more
Estimated maximum scale

Rainfall criteria prerequisite to designation of estimated flooding areas

Takahashigawa River: two day total rainfall 938mm
Inland water: one hour rainfall 130mm
(Heavy rain that occurs once every 1000 years or more in general)

Estimated flooding areas due to **estimated maximum scale rainfall (once every 1000 years or more)** for river overflow flooding and inland water flooding show the range and risk of flooding. In addition, areas historically flooded since 2008 or later are included.

Please note there is a potential for flooding in the areas outside the estimated areas, depending on rainfall conditions.

Legend

Symbols for evacuation	Map symbols
Main evacuation center	Administrative boundary
Designated evacuation center (indoor)	School zone (block) boundary
Main highway	Government office
Dangerous points on the way to evacuation	Fire station, fire brigade, etc.
Underground	Police station, police box, etc.
Bridge, underpass	Hospital
	Disaster radio broadcast system
	Water level observation site

Note1: School zone (block) boundaries are approximate.
Note2: The names of evacuation centers in school zones (blocks) are shown in thick-bordered boxes.

Estimated flooding areas and maximum water level

River overflow flooding

- 5.0m~** Flooding above 2nd floor roof
- 3.0~5.0m** Flooding of 2nd floor
- 0.5~3.0m** Flooding up to 1st floor ceiling
- 0~0.5m** Flooding up to adult knee

Inland water flooding

- 0.5m~** * Evacuation difficult due to water flow
- 0~0.5m**

Historically flooded area
* Areas where flooding occurred due to heavy rain in 2008 or later

Note: See P11 for the difference between river overflow flooding and inland water flooding.

Evacuation

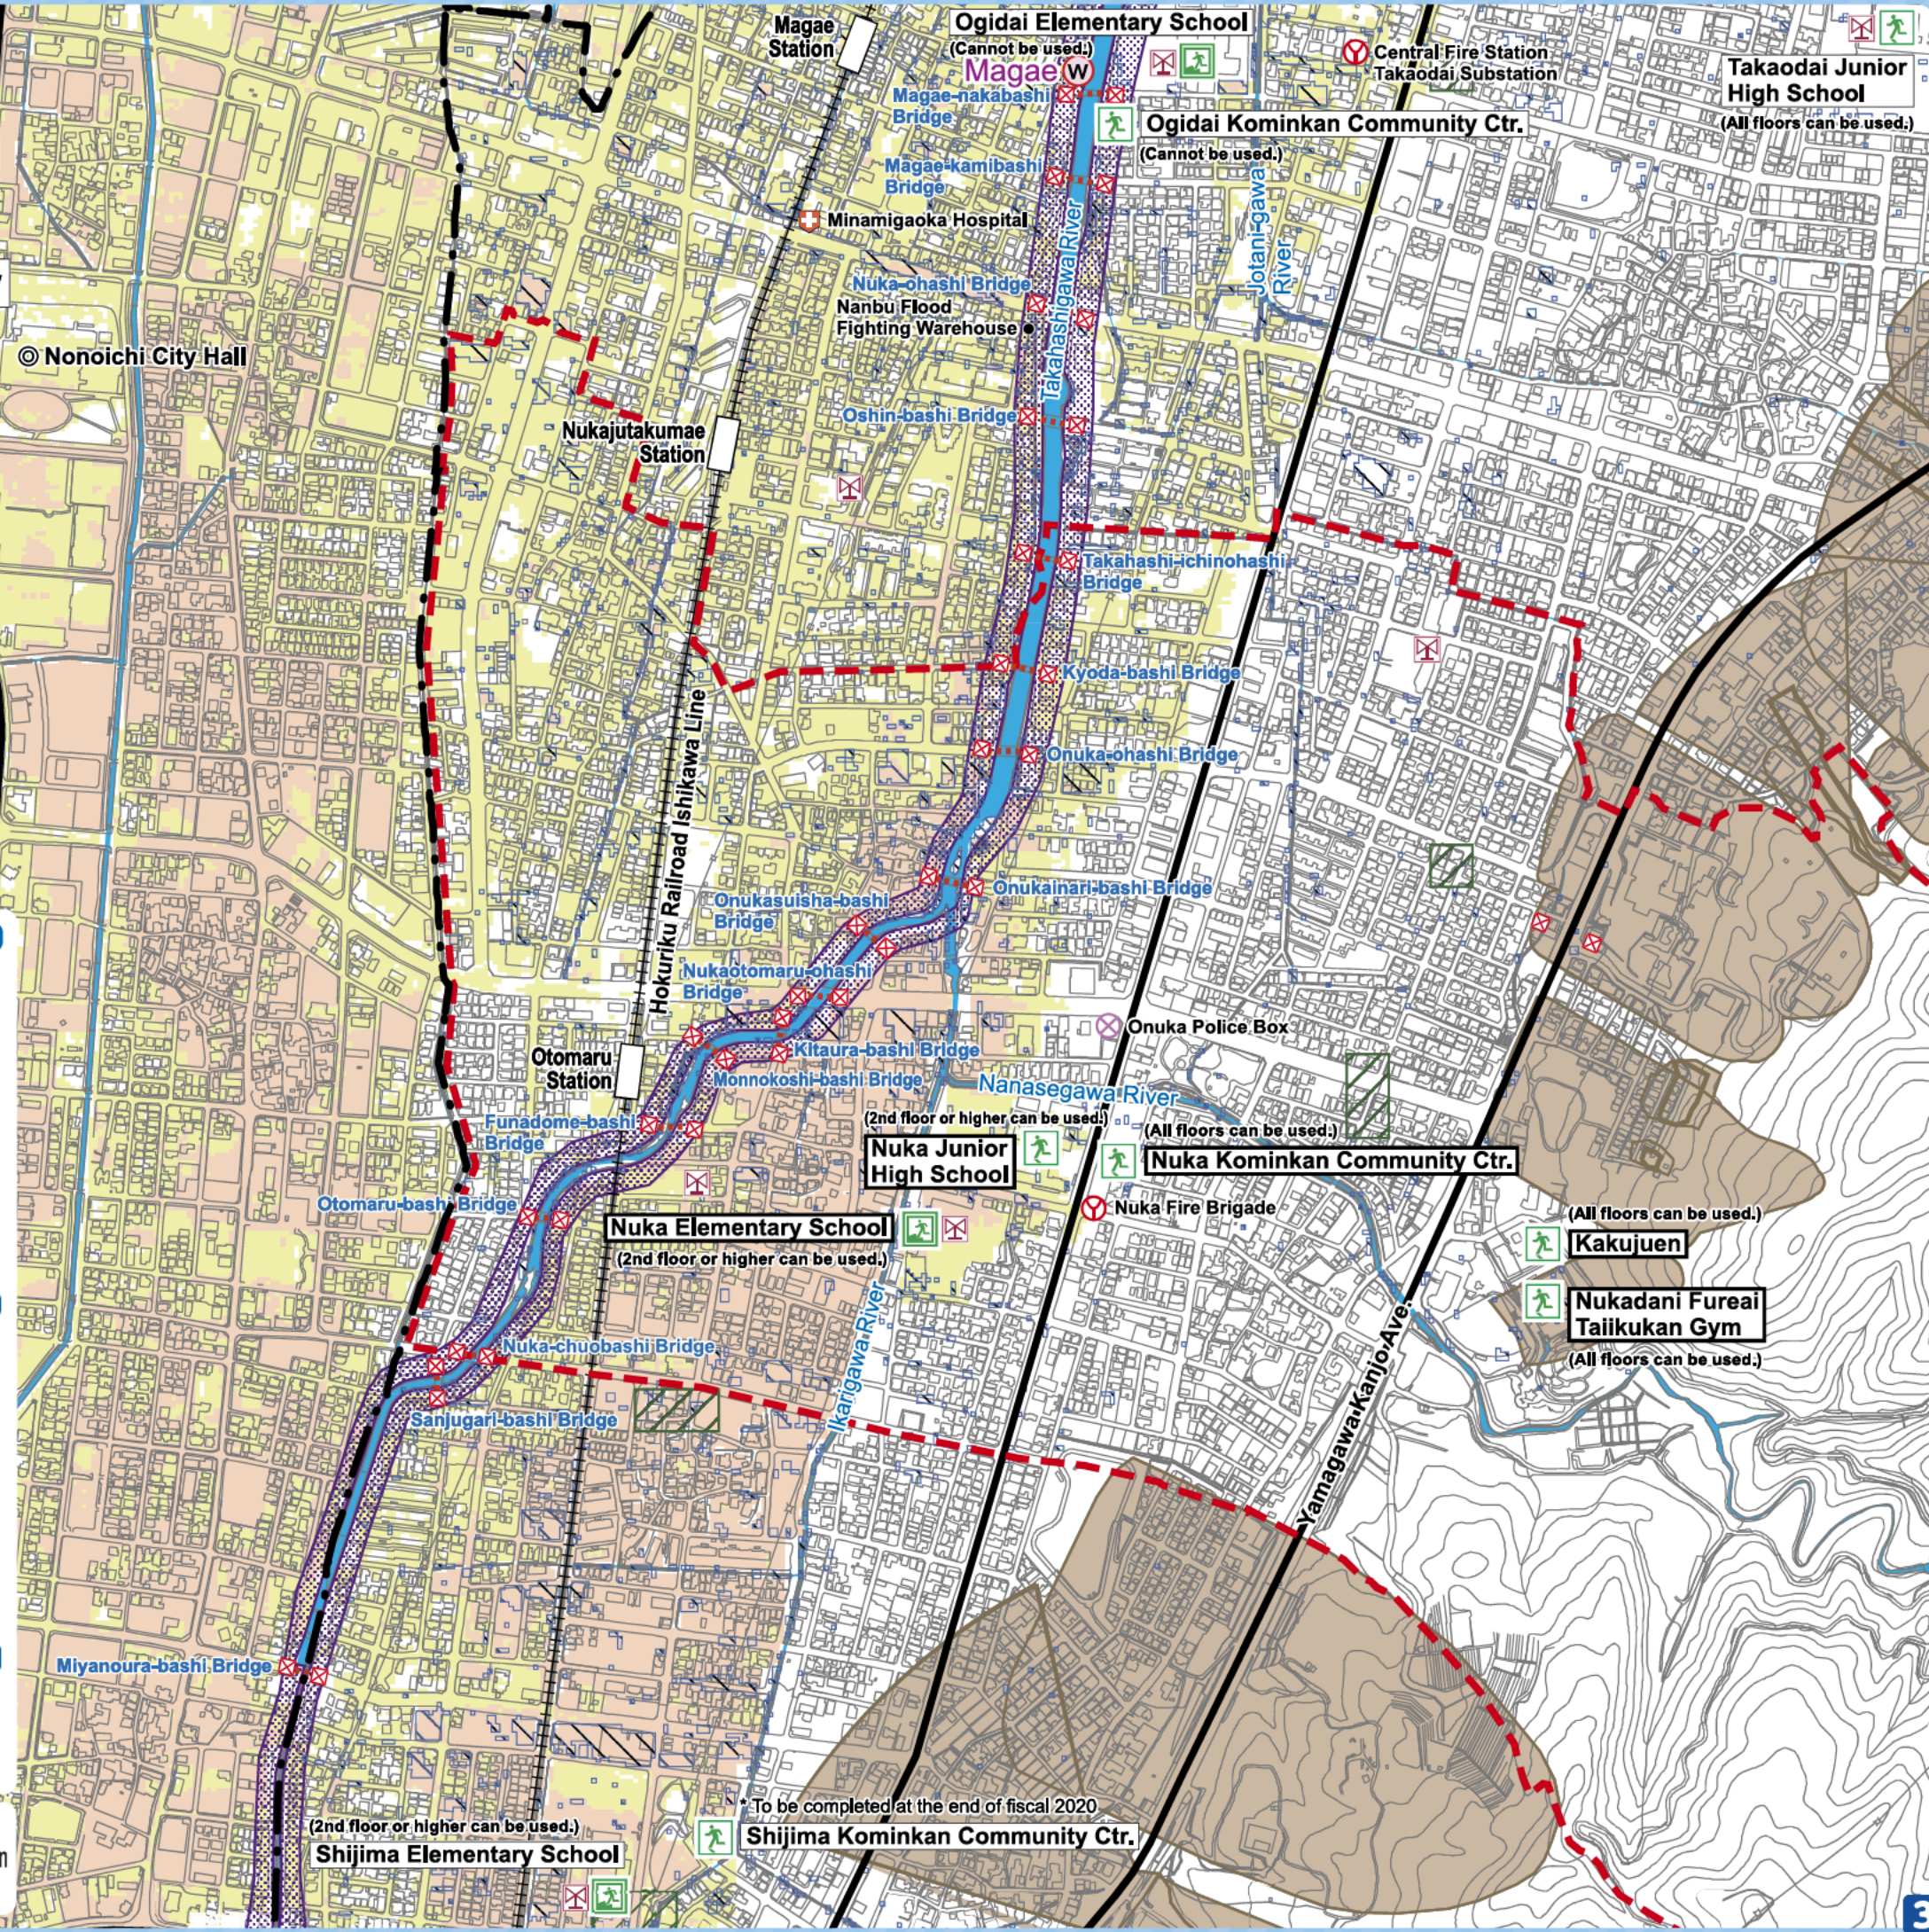

Areas where evacuation is required (due to building collapse)

Riverbank erosion
Area where buildings may collapse due to embankment destruction

Overflow
Areas where buildings may collapse due to water flow

Sediment disaster

Sediment disaster risk areas
Sediment disaster hazard areas

*To be completed at the end of fiscal 2020

Nuka School Zone

Heavy rain that occurs once every 50 years
Estimated flood scale

Rainfall criteria prerequisite to designation of estimated flooding areas

Takahashigawa River: two day total rainfall 240mm
 (Heavy rain that, in general, occurs once every 50 years)

This hazard map shows a simulation of river overflow flooding due to heavy rain that occurs once every 50 years (in general), including the range and risk of flooding. In addition, areas historically flooded due to inland water flooding since 2008 or later are included.

Please note there is a potential for flooding in the areas outside the estimated areas, depending on rainfall conditions.
