

Tagami School Zone

Heavy rain that occurs once every 1000 years or more
Estimated maximum scale

Rainfall criteria prerequisite to designation of estimated flooding areas

Asanogawa River: two day total rainfall 914mm
Inland water: one hour rainfall 130mm
(Heavy rain that occurs once every 1000 years or more in general)

Estimated flooding areas due to **estimated maximum scale rainfall (once every 1000 years or more)** for river overflow flooding and inland water flooding show the range and risk of flooding. In addition, areas historically flooded since 2008 or later are included. Please note there is a potential for flooding in the areas outside the estimated areas, depending on rainfall conditions.

Legend

- | | |
|--|----------------------------------|
| Symbols for evacuation | Map symbols |
| Main evacuation center | Administrative boundary |
| Designated evacuation center (indoor) | School zone (block) boundary |
| Main highway | Government office |
| Dangerous points on the way to evacuation | Fire station, fire brigade, etc. |
| Underground | Police station, police box, etc. |
| Bridge, underpass | Hospital |
| | Disaster radio broadcast system |
| | Water level observation site |

Note1: School zone (block) boundaries are approximate.
Note2: The names of evacuation centers in school zones (blocks) are shown in thick-bordered boxes.

Estimated flooding areas and maximum water level

River overflow flooding

- 5.0m~ Flooding above 2nd floor roof
- 3.0~5.0m Flooding of 2nd floor
- 0.5~3.0m Flooding up to 1st floor ceiling
- 0~0.5m Flooding up to adult knee

Inland water flooding

- 0.5m~ *Evacuation difficult due to water flow
- 0~0.5m

Historically flooded area

* Areas where flooding occurred due to heavy rain in 2008 or later

Note: See P11 for the difference between river overflow flooding and inland water flooding.

Evacuation

Areas where evacuation is required (due to building collapse)

Riverbank erosion

Area where buildings may collapse due to embankment destruction

Overflow

Areas where buildings may collapse due to water flow

Sediment disaster

Sediment disaster risk areas
Sediment disaster hazard areas

Hokuriku University
(All floors can be used.)

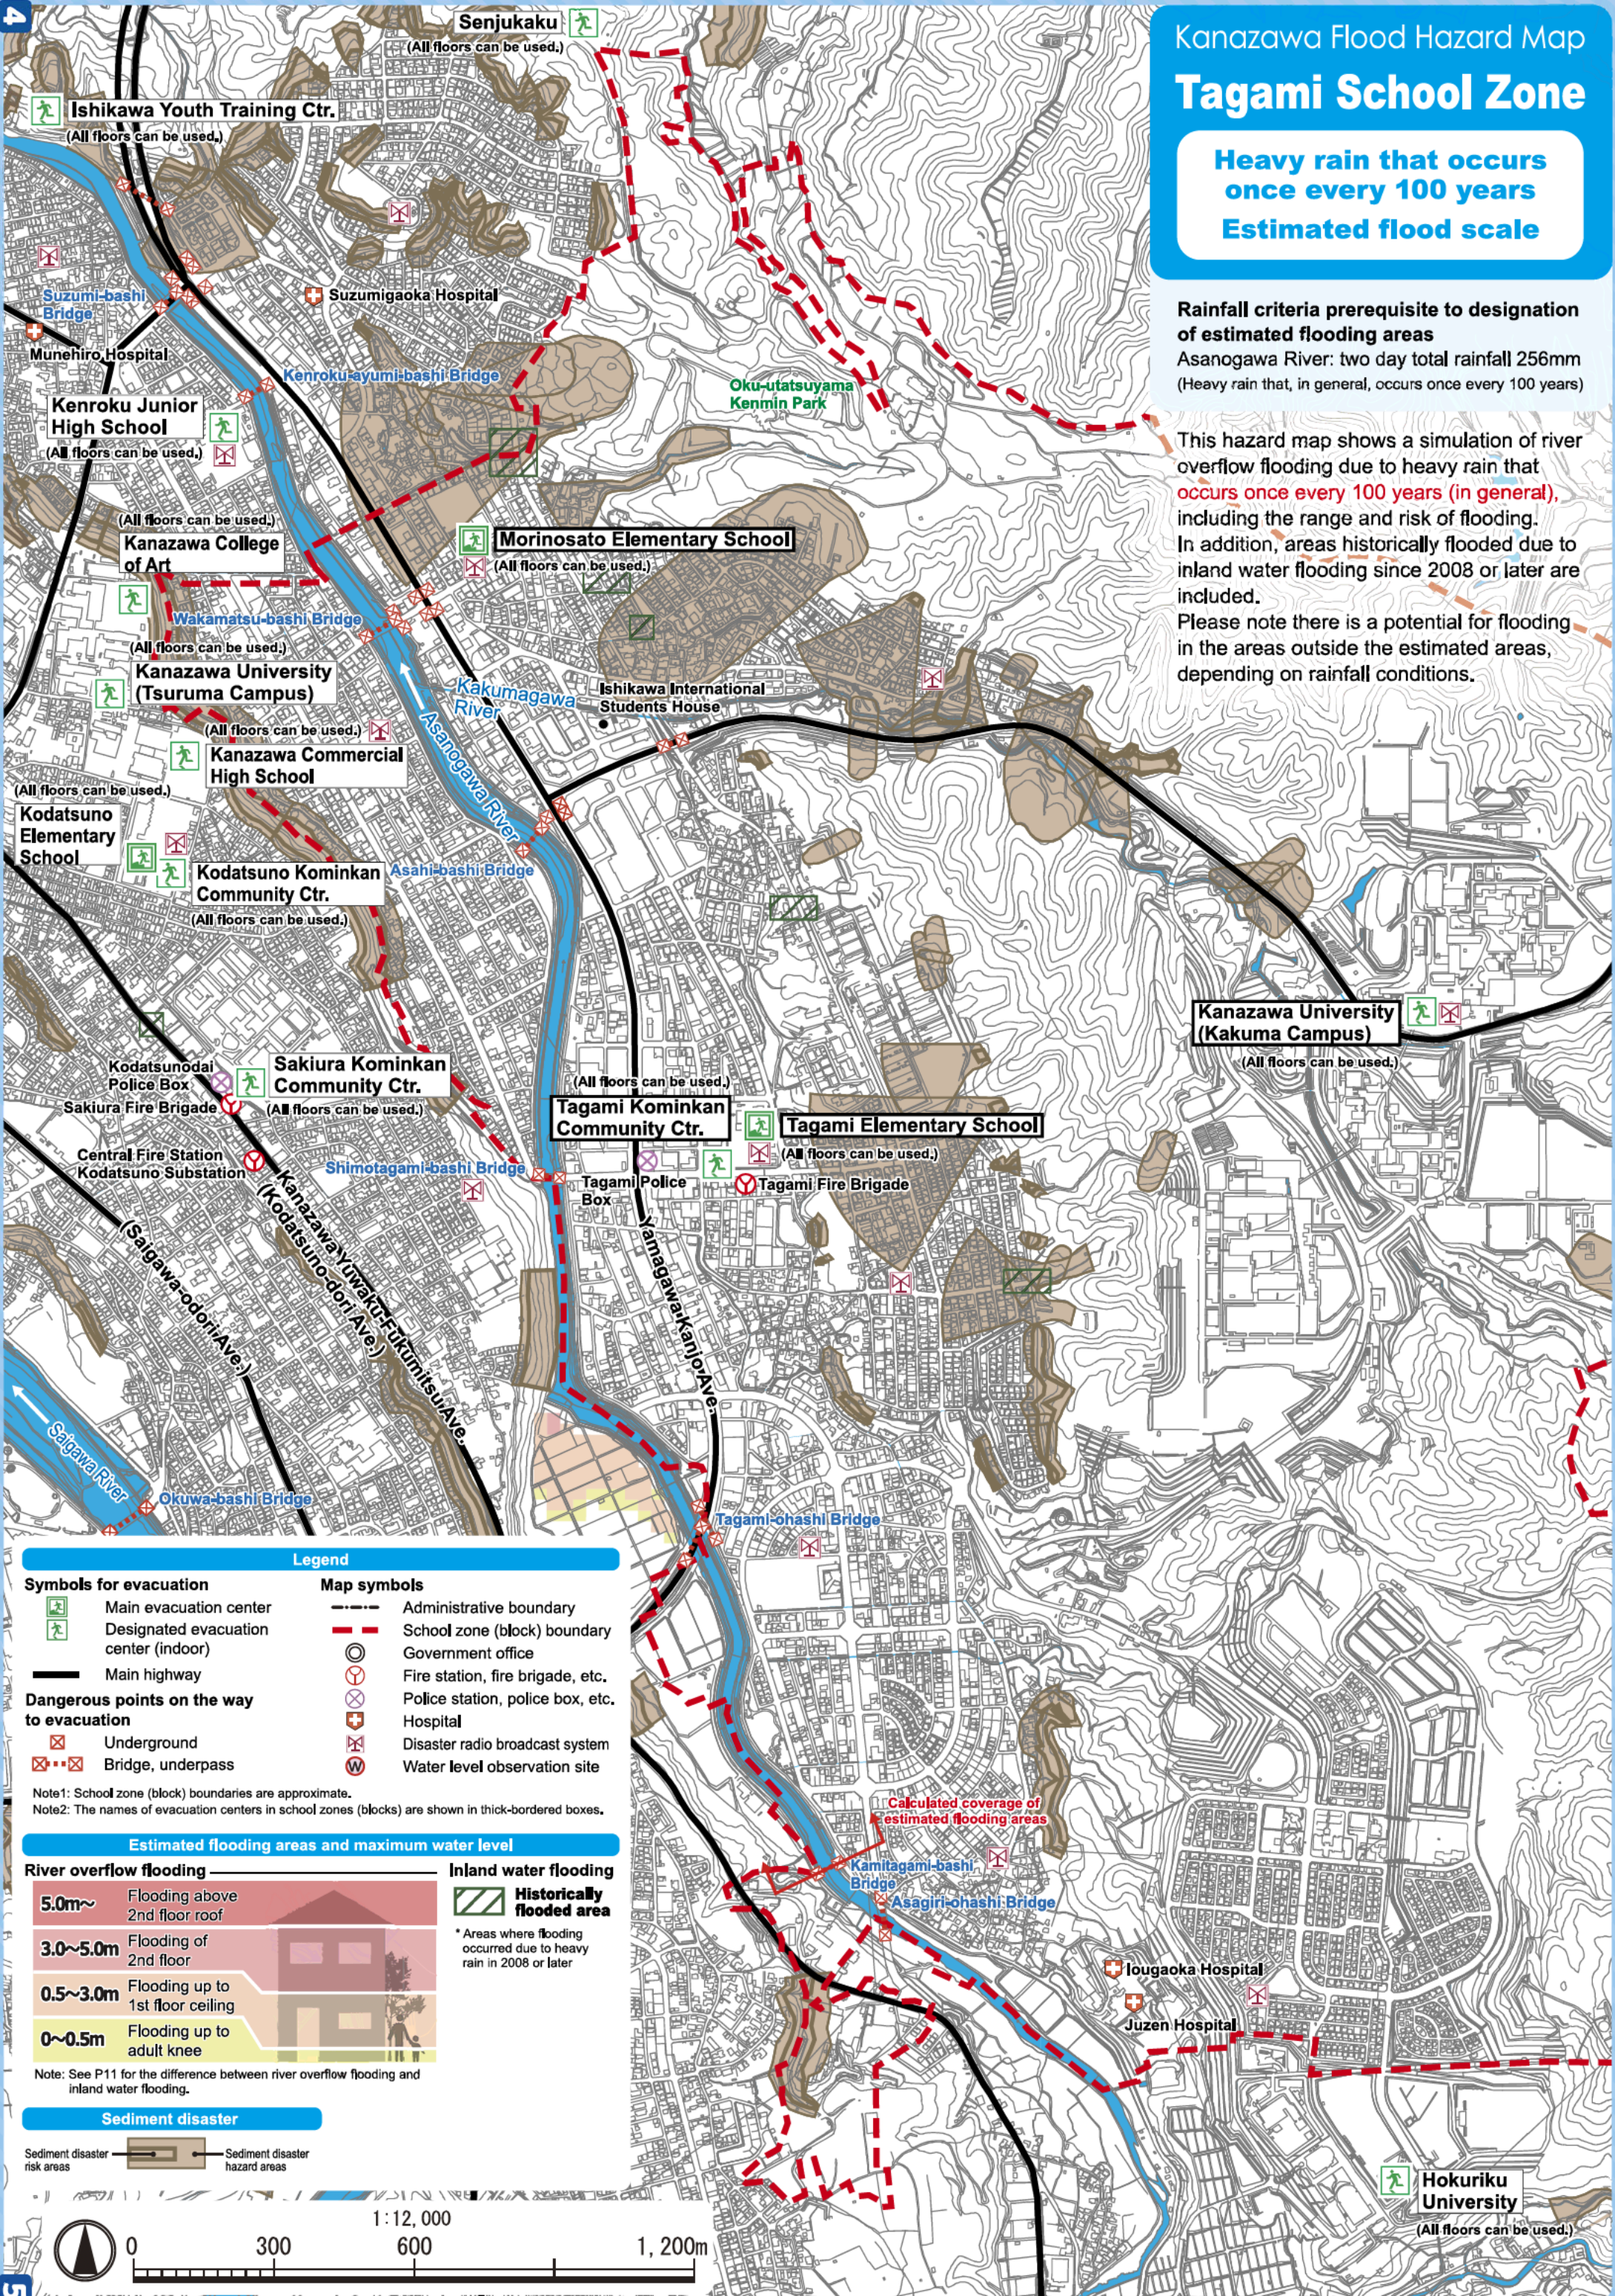

Tagami School Zone

Heavy rain that occurs once every 100 years
Estimated flood scale

Rainfall criteria prerequisite to designation of estimated flooding areas

Asanogawa River: two day total rainfall 256mm
(Heavy rain that, in general, occurs once every 100 years)

This hazard map shows a simulation of river overflow flooding due to heavy rain that occurs once every 100 years (in general), including the range and risk of flooding. In addition, areas historically flooded due to inland water flooding since 2008 or later are included. Please note there is a potential for flooding in the areas outside the estimated areas, depending on rainfall conditions.

My Family's Disaster Notebook

● Fill in the blanks to complete your disaster notebook.

Evacuation centers/ Evacuation routes

* Determine multiple evacuation centers and multiple routes there, and mark them on the map.

Evacuation centers

Items to carry

* Share information of the storage places among family members.

Storage places

Shared commitment

* Please cooperate in your community to help people who need evacuation support.

Commitment

[For reference] Evacuation centers in your area and nearby areas (The available floors are for estimated maximum scale rainfall)
