

Togashi School Zone

Heavy rain that occurs once every 1000 years or more
Estimated maximum scale

Rainfall criteria prerequisite to designation of estimated flooding areas

Fushimigawa River: two day total rainfall 931mm
Takahashigawa River: two day total rainfall 938mm
Inland water: one hour rainfall 130mm
(Heavy rain that occurs once every 1000 years or more in general)

Estimated flooding areas due to **estimated maximum scale rainfall (once every 1000 years or more)** for river overflow flooding and inland water flooding show the range and risk of flooding. In addition, areas historically flooded since 2008 or later are included.

Please note there is a potential for flooding in the areas outside the estimated areas, depending on rainfall conditions.

Togashi School Zone

Heavy rain that occurs once every 50 years
Estimated flood scale

Rainfall criteria prerequisite to designation of estimated flooding areas

Fushimigawa River: two day total rainfall 240mm
 Takahashigawa River: two day total rainfall 240mm
 (Heavy rain that, in general, occurs once every 50 years)

This hazard map shows a simulation of river overflow flooding due to heavy rain that occurs once every 50 years (in general), including the range and risk of flooding. In addition, areas historically flooded due to inland water flooding since 2008 or later are included.

Please note there is a potential for flooding in the areas outside the estimated areas, depending on rainfall conditions.
